

Progression - Working Scientifically

KSI	-> LKS2	-> UKS2
KSI (Y1 and Y2) Asking Questions -ask simple questions and recognise that they can be answered in different ways Measuring and Recording -observe closely, using simple equipment -perform simple tests -gather and record data to help in answering questions Concluding -identify and classify -use their observations and ideas to suggest answers to questions	LKS2 (Y3 and Y4) Asking Questions -ask relevant questions and use different types of scientific enquiries to answer them -set up simple practical enquiries, comparative and fair tests Measuring and Recording -make systematic and careful observations and, where appropriate, take accurate measurements using standard units, using a range of equipment, including thermometers and data loggers -record findings using simple scientific language, drawings, labelled diagrams, keys, bar charts, and tables -gather, record, classify and present data in a variety of ways to help in answering questions Concluding -identify differences, similarities or changes related to simple scientific ideas and processes	UKS2 (Y5 and Y6) Asking Questions -plan different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary Measuring and Recording -take measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate -record data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs Concluding -identify scientific evidence that has been used to support or refute ideas or arguments -report and present findings from enquiries,

- report on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions
- use straightforward scientific evidence to answer questions or to support their findings

Evaluating

- use results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions

- including conclusions, causal relationships and explanations of and degree of trust in results
- present results in oral and written forms such as displays and other presentations

Evaluating

- use test results to make predictions to set up further comparative and fair tests

Year 5 and Year 6

Topic (Cross Curricular)	NC Topics/ Objectives
Space (Cycle A)	Space (Y5) • Describe the movement of the Earth and other planets relative to the sun in the solar system • Describe the movement of the moon relative to the Earth • Describe the sun, Earth and moon as approximately spherical bodies • Use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky Forces (Y5) • Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object • Identify the effects of air resistance, water resistance and friction, that act between moving surfaces • Recognise that some mechanisms including levers, pulleys and gears allow a smaller force to have a greater effect
WW2 (Cycle A)	Light (Y6) • Recognise that light appears to travel in straight lines • Use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye • Explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes • Use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them Electricity (Y6) • Associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit • Compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches • Use recognised symbols when representing a simple circuit in a diagram

Vikings (Cycle A)	Animals Including Humans (Y6) • Identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood • Recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function • Describe the ways in which nutrients and water are transported within animals, including humans
The Rainforest (Cycle B)	Living Things and their Habitats (Y5) • Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird • Describe the life process of reproduction in some plants and animals
Frozen Kingdom (Cycle B)	Materials (Y5) • Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets • Know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution • Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating • Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic • Demonstrate that dissolving, mixing and changes of state are reversible changes • Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda
Darwin (Cycle B)	Living Things (Y6) • Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals • Give reasons for classifying plants and animals based on specific characteristics Inheritance (Y6)

	• Recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago • Recognise that living things produce offspring of the same kind, but normally, offspring vary and are not identical to their parents • Identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution
Greeks (Cycle B)	Animals Including Humans (Y5) • Describe the changes as humans develop to old age
